Zéphyrine Ménard

Ford Viscosity Cups Cup No 2 No 3 No 4 Byk Introduction

Thomas Scientific

No doubt: A perfect coating has to look brilliant! But other properties of coatings are also most important. Coatings have to be durable, tough and easily applicable. Additives are the key to success in achieving these characteristics, even though the amounts used in coating formulations are small. It is not trivial at all to select the best additives. In practice, many series of tests are often necessary, and the results do not explain, why a certain additive improves the quality of a coating and another one impairs the coating. This book is dedicated to developers and applicants of coatings working in research or production, and it is aimed at providing a manual for their daily work. It will answer the following questions: How do the most important groups of additives act? Which effects can be achieved by their addition? Scientific theories are linked to practical applications. Emphasis is put on the optical aspects that are most important for the applications in practice. This book is a milestone in quality assurance in the complete field of coatings!

Additives for Coatings

This book is unique in that it brings together published viscosity data, experimental methods, theoretical, correlation and predictive procedures in a single volume. The readers will get a better understanding of why various methods are used for measuring viscosity of different types of liquids and why an experimental method is dependent on fluid characteristics, such as Newtonian or non-Newtonian fluids.

Viscosity of Liquids

Egyptian hieroglyphs, Chinese scrolls, and Ayurvedic literature record physicians administering aromatic oils to their patients. Today society looks to science to document health choices and the oils do not disappoint. The growing body of evidence of their efficacy for more than just scenting a room underscores the need for production standards, quality control parameters for raw materials and finished products, and well-defined Good Manufacturing Practices. Edited by two renowned experts, the Handbook of Essential Oils covers all aspects of essential oils from chemistry, pharmacology, and biological activity, to production and trade, to uses and regulation. Bringing together significant research and market profiles, this comprehensive handbook provides a much-needed compilation of information related to the development, use, and marketing of essential oils, including their chemistry and biochemistry. A select group of authoritative experts explores the historical, biological, regulatory, and microbial aspects. This reference also covers sources, production, analysis, storage, and transport of oils as well as aromatherapy, pharmacology, toxicology, and metabolism. It includes discussions of biological activity testing, results of antimicrobial and antioxidant tests, and penetration-enhancing activities useful in drug delivery. New information on essential oils may lead to an increased understanding of their multidimensional uses and better, more ecologically friendly production methods. Reflecting the immense developments in scientific knowledge available on essential oils, this book brings multidisciplinary coverage of essential oils into one all-inclusive resource.

Handbook of Essential Oils

Arising from an examination in 1969 of the education and training opportunities for paint industry technicians, it was recognized that the various courses available at that time did not fully serve their needs. While a few large companies had developed in-house training arrangements, the many medium and smaller firms in the raw material supply, paint manufacturing or paint user industries, were unable to provide their own comprehensive training programs. With a view to improving this situation, an advisory committee comprising representatives of the Australian Paint Manufacturers' Federation and the Oil and Colour Chemists' Association Australia was established to liaise directly with the New South Wales Department of Technical and Further Education. As a result plans were developed for the introduction of a Special Course in 'Surface Coatings Technology' in 1971, conducted by the Sydney Technical College. The scope of the course was designed to cover all aspects of surface coatings technology ranging from raw materials and formulations to the production, testing, evaluation, application and use of finished products. The course proved to be highly successful and in 1973 a similar syllabus was introduced by the Melbourne School of Painting, Decorating and Signcrafts in Victoria. In 1980, New Zealand followed suit with a similar course conducted by the Auckland Technical Institute.

Surface Coatings

This book has been a long time in the making. Since its beginning the concept has been refined many times. This is a first attempt at a technical book for me and fortunately the goals I have set have been achieved. I have been involved in water based ink evaluation since its unclear beginnings in the early 1970s. This book is fashioned much like a loose-leaf binder I had put together for early reference and guidance. The format has worked for me over the years; I trust it will work for you. I would like to thank the many people who made this book possible, particularly Blackie Academic & Professional for their saint-like patience. Thanks again to W.B. Thiele (Thiele-Engdahl), to Lucille, my wife, and to James and Frank, my two boys. A final and special thank you to Richard Bach who taught me there are no limits.

The Redwood Viscometer

Since the first editions of these books were published there have been many significant advances in the field of surface coatings. These second editions are written at a level suitable for graduates new to the resins and surface coatings industries. They give a basic understanding of the topics covered, whilst reflecting recent advances within the industry. Within these three books the chemistries of different types of resins for surface coatings are explained. In each case, an overview is given, suitable for the graduate new to industry or for less technically involved management. Coating formulations are given to illustrate the use of different types of resin. As with the chemistry, they are not meant to be exhaustive. These books should provide a valuable guide for formulators and should be considered as an essential aid for the 'bench chemist'. The aim has been to give a general overview, including the necessary background information required to ensure that coating formulators understand the resins with which they are working and the principles of crosslinking.

Chemistry and Technology of Water Based Inks

The conceptualization and formulation of skin care products intended for topical use is a multifaceted and evolving area of science. Formulators must account for myriad skin types, emerging opportunities for product development as well as a very temperamental retail market. Originally published as "Apply Topically" in 2013 (now out of print), this reissued detailed and comprehensive handbook offers a practical approach to the formulation chemist's day-to-day endeavors by: Addressing the innumerable challenges facing the chemist both in design and at the bench, such as formulating with/for specific properties; formulation, processing and production techniques; sensory and elegance; stability and preservation; color cosmetics; sunscreens; Offering valuable guidance to troubleshooting issues regarding ingredient selection and interaction, regulatory concerns that must be addressed early in development, and the extrapolation of

preservative systems, fragrances, stability and texture aids; Exploring the advantages and limitations of raw materials; Addressing scale-up and pilot production process and concerns; Testing and Measurements Methods. The 22 chapters written by industry experts such as Roger L. McMullen, Paul Thau, Hemi Nae, Ada Polla, Howard Epstein, Joseph Albanese, Mark Chandler, Steve Herman, Gary Kelm, Patricia Aikens, and Sam Shefer, along with many others, give the reader and user the ultimate handbook on topical product development.

Resins for Surface Coatings, 3VL Set

Now in its second edition and still the only book of its kind, this is an authoritative treatment of all stages of the coating process -- from body materials, paint shop design, and pre-treatment, through primer surfacers and top coats. New topics of interest covered are color control, specification and testing of coatings, as well as quality and supply concepts, while valuable information on capital and legislation aspects is given. Invaluable for engineers in the automotive and paints and coatings industry as well as for students in the field.

Handbook of Formulating Dermal Applications

Rachel is a Jew living in Kishinev, Russia. At fourteen, she has dreams of being a writer. But everything is put on hold when a young man is murdered and Rachel is forced to keep the murderer's identity a secret. Tensions mount and Rachel watches as lies and anti-Jewish propaganda leap off the pages of the local newspaper, inciting many to riot against the Jews. Violence breaks out on Easter Sunday, 1903, and when it finally ends, Rachel finds that the person she loves most is dead and that her home has been destroyed. Her main support comes surprisingly from a young Christian named Sergei. With everything against them, the two young people find comfort in their growing bond, one of the few signs of goodness and hope in a time of chaos and violence.

Automotive Paints and Coatings

Non Aboriginal material.

Rachel's Secret

Throughout the world, milk and milk products are indispensable components of the food chain. Not only do individual consumers use liquid milk for beverages and cooking, but food manufacturers use vast quantities of milk powder, concentrated milks, butter, and cream as raw materials for further processing. Effective quality assurance in the dairy industry is needed now more than ever. This completely revised and expanded Third Edition of Dairy Microbiology Handbook, comprising both Volume I: Microbiology of Milk and Volume II: Microbiology of Milk Products, updates the discipline's authoritative text with the latest safety research, guidelines, and information. Pathogens have become a major issue in dairy manufacturing. *Escheria coli* is a concern, and milk-borne strains of *Mycobacterium avium* sub-sp. *paratuberculosis* have been identified as a possible cause of Crohn's disease. Even little-known parasites like *Cryptosporidium* have caused disease outbreaks. Consequently, a hazard analysis of selected control/critical points (HACCP) in any manufacturing process has become essential to prevent the contamination of food. This volume also: - Discusses new diagnostic techniques that allow a pathogen to be detected in a retail sample in a matter of hours rather than days - Provides thorough coverage of dairy microbiology principles as well as practical applications - Includes the latest developments in dairy starter cultures and genetic engineering techniques - Offers completely updated standards for Good Manufacturing Practice Quality control and product development managers, microbiologists, dairy scientists, engineers, and graduate students will find the Third Edition of Dairy Microbiology Handbook to be a vital resource.

New Guinea Diaries, 1871-1883

The nine interrelated chapters in this book aim to identify and describe the iconographies and trace fossils of ritual and religion in late prehistoric Europe - to infuse them with meaning, celebrate their complexity and integrate the ideas, which they evoke into the rich tapestry of historically transmitted ancient European and Mediterranean ideology, mythology and ritual. This book explores libation and feasting, engendered patterns of communication, ritual drama and iconographic creativity. Case studies range from 13th century BC Bavarian ostentatious graves, 9th century Scandinavian bog hoards, 8th century Austrian women's chambered tombs, 7th century Lusatian children's graves to 6th century BC Scythian kurgans from the Ukraine. A thick description of ancient European ideology emerges demonstrating that non-literate communities were developing surprisingly vibrant and sophisticated solutions to the problems posed by transcending death, revering the ancestors and communicating between earth and eternity.

Dairy Microbiology Handbook

Industrial Organization: Markets and Strategies provides an up-to-date account of modern industrial organization that blends theory with real-world applications. Written in a clear and accessible style, it acquaints the reader with the most important models for understanding strategies chosen by firms with market power and shows how such firms adapt to different market environments. It covers a wide range of topics including recent developments on product bundling, branding strategies, restrictions in vertical supply relationships, intellectual property protection, and two-sided markets, to name just a few. Models are presented in detail and the main results are summarized as lessons. Formal theory is complemented throughout by real-world cases that show students how it applies to actual organizational settings. The book is accompanied by a website containing a number of additional resources for lecturers and students, including exercises, answers to review questions, case material and slides.

Organic Coatings; Properties, Selection, and Use

This is the first edition of a unique new plastics industry resource: Who's Who in Plastics & Polymers. It is the only biographical directory of its kind and includes contact, affiliation and background information on more than 3300 individuals who are active leaders in this industry and related organizations. The biographical directory is in alphabetical order by individual name. After each individual name, current affiliation and contact information is provided. This includes job title, full name of affiliation (e.g., business, university, association, research institute), business address, and electronic contacts-telephone, fax, e-mail and Web site. Home addresses and contacts are also provided for most of the entries. In the biographical summary section for each individual, the following information is provided: date and place of birth, education and educational achievements, work experience including company or other organization names, positions held and time periods. Also included in this section are the number of patents awarded, articles, and book chapters authored, and conference sessions chaired. Other information includes titles of books edited or written by the individual, listing of conferences where the person had a leadership position, and listing of memberships and positions held in professional organizations. Finally, professional and civic awards are listed. Indexes provide listings of individuals by company or other organization name, and also by geographical location. Who's Who in Plastics & Polymers is now published in a limited edition of 1,000 copies. This edition will not be reprinted. To be sure of receiving your copy, please act now. Information on ordering follows sample pages on the reverse.

Drinking Against Death

This is a work on the history of man, written by Latham to update and expand on existing ethnological literature. The Beothuk and Micmac peoples of Newfoundland and Labrador are briefly discussed in section F on pp. 328-330, 372.

Industrial Organization

Written in easy-to-read and -use format, this book updates and revises its bestselling predecessor to become the most complete, comprehensive resource on plastics testing. This book has an emphasis on significance of test methods and interpretation of results. The book covers all aspects of plastics testing, failure analysis, and quality assurance - including chapters on identification analysis, failure analysis, and case studies. The book concludes with a substantial appendix with useful data, charts and tables for ready reference. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

Narrative of a Residence in Koordistan, and on the Site of Ancient Nineveh; with Journal of a Voyage Down the Tigris to Bagdad and an Account of a Visit to Shirauz and Persepolis

The new Handbook on Basics of Coating Technology is a classic reference recently updated with 18 years worth of new technology, standards, and developments in the worldwide coating industry. This is an indispensable reference for anyone in the industry. Whether you are involved in traditional processes or the most innovative, this handbook will be a critical addition to your daily routine. Full of color images, graphs, and figures, the handbook comes complete with standard tables, general classification figures, definitions, and an extensive keyword index. Both engineers and technicians will find the answers they need within its pages. Instead of solving problems \"after the fact,\" this handbook helps avoiding them in the first place, saving time and money. This reference also gives beginners and practically oriented readers a journey through the different coating segments clearly illustrated with lots of pictures. It also outlines the social changes in the industry concerning environmental compatibility and toxicology which have seriously affected product development.

Who's Who in Plastics Polymers, First Edition

This book focuses on the polyolefin additives that are currently important in the plastics industry, alongside new additives of increasing interest, such as nanofillers and environmentally sustainable materials. As much as possible, each chapter emphasizes the performance of the additives in the polymer, and the value each relevant additive brings to polypropylene or polyethylene. Where possible, similar additives are compared by capability and relative cost. With major sections for each additive function, this book provides a highly practical guide for engineers and scientists creating and using polyolefin compounds, who will find in this book a wealth of detail and practical guidance. This unique resource will enable them to make practical decisions about the use of the various additives, fillers, and reinforcements specific to this family of materials. ABOUT THE AUTHOR Michael Tolinski is a freelance writer and a lecturer at the University of Michigan's College of Engineering. He is a frequent contributor to Plastics Engineering and Manufacturing Engineering. Structured to make it easy for the reader to find solutions for specific property requirements Contains a number of short case studies about companies that have used or developed a particular additive to achieve a desired result Covers environmental resistance, mechanical property enhancement, appearance enhancement, processing aids, and other modifications of form and function

The Natural History of the Varieties of Man

Containing information on the US Navy's customs and ceremonies, this new edition includes details of the recent technological advances in today's Navy. The book has sections covering weapons, ships and aircraft, training procedures and the code of military justice.

Travels Into Bokhara

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror

surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

Handbook of Plastics Testing and Failure Analysis

This work explores the history of life-extensionism in the 20th century. The term life-extensionism is meant to describe an ideological system professing that radical life extension (far beyond the present life expectancy) is desirable on ethical grounds and is possible to achieve through conscious scientific efforts. This work examines major lines of life-extensionist thought, in chronological order, over the course of the 20th century, while focusing on central seminal works representative of each trend and period, by such authors as Elie Metchnikoff, Bernard Shaw, Alexis Carrel, Alexander Bogomolets and others. Their works are considered in their social and intellectual context, as parts of a larger contemporary social and ideological discourse, associated with major political upheavals and social and economic patterns. The following national contexts are considered: France (Chapter One), Germany, Austria, Romania and Switzerland (Chapter Two), Russia (Chapter Three), the US and UK (Chapter Four). This work pursues three major aims. The first is to attempt to identify and trace throughout the century several generic biomedical methods whose development or applications were associated with radical hopes for life-extension. Beyond mere hopefulness, this work argues, the desire to radically prolong human life often constituted a formidable, though hardly ever acknowledged, motivation for biomedical research and discovery. It will be shown that novel fields of biomedical science often had their origin in far-reaching pursuits of radical life extension. The dynamic dichotomy between reductionist and holistic methods will be emphasized. The second goal is to investigate the ideological and socio-economic backgrounds of the proponents of radical life extension, in order to determine how ideology and economic conditions motivated the life-extensionists and how it affected the science they pursued. For that purpose, the biographies and key writings of several prominent longevity advocates are studied. Their specific ideological premises (attitudes toward religion and progress, pessimism or optimism regarding human perfectibility, and ethical imperatives) as well as their socioeconomic conditions (the ability to conduct and disseminate research in a specific social or economic milieu) are examined in an attempt to find out what conditions have encouraged or discouraged life-extensionist thought. This research argues for the inherent adjustability of life-extensionism, as a particular form of scientific enterprise, to particular prevalent state ideologies. The third, more general, aim is to collect a broad register of life-extensionist works, and, based on that register, to establish common traits and goals definitive of life-extensionism, such as valuation of life and constancy, despite all the diversity of methods and ideologies professed. This work will contribute to the understanding of extreme expectations associated with biomedical progress that have been scarcely investigated by biomedical history.

BASF Handbook on Basics of Coating Technology

Alexander Burnes (1805 - 1841) recounts in his personal memoir his time journeying to and living in Cabool from 1836-38. Burnes was a British traveler and explorer. He is most famous for exploring Bukhara. Burnes took part in the Great Game. The Great Game was a rivalry between the British Empire and Russia for supremacy in Central Asia. The Great Game began with the Russo-Persian Treaty of 1813 and lasted until the Anglo-Russian Convention of 1907. Burnes left Bombay in 1836 and traveled in and around Afghanistan until 1838. Burnes's narrative gave Britain its first in depth study of this area. The British curiosity about exotic lands made his book immensely popular.

Additives for Polyolefins

The present volume is the fifth in the series of yearbooks with the title Globalistics and Globalization Studies. The subtitle of the present volume is Global Transformations and Global Future. We become more and more accustomed to think globally and to see global processes. And our future can all means be global. However, is this statement justified? Indeed, in recent years, many have begun to claim that globalization has stalled, that we are rather dealing with the process of anti-globalization. Will not we find ourselves at some point again in an edifice spanning across the globe, but divided into national apartments, separated by walls of high tariffs and mutual suspicion? Of course, some setbacks are always possible, because the process of globalization cannot develop smoothly. It is a process which is itself emerging from contradictions and is shaped by a new contradiction. They often go much further than underlying systemic changes allow. They break forward, as the vanguard of a victorious army, and then often meet resistance of various social and political forces and may suddenly start to roll back just at the moment when everyone expects their further offensive. We believe that this is what is happening with globalization at present. The yearbook will be interesting to a wide range of researchers, teachers, students and all those who are concerned about global issues.

Complete Manual of the Auxiliary Language Ido

This text offers a basic understanding of the topic, whilst reflecting recent advances within the industry. It considers in detail two of the most important types of resins, alkyd resins and polyester resins, and contains a broad range of topics on alkyd resins, including different types of alkyds, raw materials for alkyd resins and the chemistry and manufacture of alkyd resins. In addition, typical alkyd formulations and suggested end uses are discussed, as is the important topic of paint formulation with alkyd resins. Discusses in detail the applications of polyester resins in surface coatings, the raw materials used (including polyacids and polyols) and different crosslinking systems, as well as giving examples of some typical polyester resin formulations.

The Old and Middle English

This ebook offers an overview of the most important aspects and applications of additives for waterborne systems in diverse market segments. Wernfried Heilen helps to understand how additives work and elucidates all kinds of mechanisms in great detail. Furthermore he dispels a lot of myths surrounding paint additives with an excellent combination of theory and practice. This enables a deep insight into all the different application areas for additives in waterborne paint systems.

The Bluejackets' Manual

The Elder or Poetic Edda of Saemun Sigfusson, bi-lingual side-by-side edition with illustrations.

Antistatic Sprays

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

A History of Life-extensionism in the Twentieth Century

A clever young girl looking for adventure gets more than she bargained for when she stumbles into a nest of robbers in this tale baked with magic, fun, and friendship! Evie Baker is a great story-teller, an avid prankster, and a fantastic baker. And while she loves her parent's bakery, she has no plans to stay in their small town and become stuffy or static. Evie wants to go on adventures and she knows just what she needs to do it! With her best friend, Cecily, by her side, Evie sets off into the Old Forest to find one of the Fel, a group of crow-like magical creatures who can't lie. She is sure her family's irresistible raspberry tart and a carefully crafted deal will get them to take her on a magical adventure—without getting her eaten or worse. But the forest hides many dangers and when they finally find their Fel, they also discover a nest of robbers! Having seen the Robber Lord's face, Evie is whisked away into hiding for her own protection. But even in the queen's own city, trouble has a way of finding her... YA novelist Caitlin Sangster makes her middle-grade debut in *A Baker's Guide to Robber Pie*, a fun fairytale filled with adventure, friendship, baking, and the power of a tale well-told.

Cabool

Printing on Polymers: Fundamentals and Applications is the first authoritative reference covering the most important developments in the field of printing on polymers, their composites, nanocomposites, and gels. The book examines the current state-of-the-art and new challenges in the formulation of inks, surface activation of polymer surfaces, and various methods of printing. The book equips engineers and materials scientists with the tools required to select the correct method, assess the quality of the result, reduce costs, and keep up-to-date with regulations and environmental concerns. Choosing the correct way of decorating a particular polymer is an important part of the production process. Although printing on polymeric substrates can have desired positive effects, there can be problems associated with various decorating techniques. Physical, chemical, and thermal interactions can cause problems, such as cracking, peeling, or dulling. Safety, environmental sustainability, and cost are also significant factors which need to be considered. With contributions from leading researchers from industry, academia, and private research institutions, this book serves as a one-stop reference for this field—from print ink manufacture to polymer surface modification and characterization; and from printing methods to applications and end-of-life issues. Enables engineers to select the correct decoration method for each material and application, assess print quality, and reduce costs. Increases familiarity with the terminology, tests, processes, techniques, and regulations of printing on plastic, which reduces the risk of adverse reactions, such as cracking, peeling, or dulling of the print. Addresses the issues of environmental impact and cost when printing on polymeric substrates. Features contributions from leading researchers from industry, academia, and private research institutions.

Globalistics and globalization studies

The average gym's annual revenue in the U.S. is less than \$300,000 with earnings before taxes, interest and depreciation is \$78,086, and it's even less for smaller studios. HOW CAN YOU BUILD YOUR GYM so that you can be the best in the industry? A GYM THAT: _____ ...is profitable ...is sustainable without constant attention ...has a strong brand that clients can trust ...has a team of superstar trainers that is so vested in the business that your success will never end! The answer is here in *FitBiz* by Daniel Nyiri. From humble beginnings of just \$150 to his name, to a multi-million dollar brand and franchise business, 4U Fitness, Daniel Nyiri has learned the ins and outs of what it takes to build a truly successful business. In this book Daniel shares the strategies necessary to achieve long term success as a gym owner by teaching you how to work ON the business instead of IN it. You'll learn invaluable information to apply to your gym so that it too can become a 7-figure business.

The Story of 100 Years of Phosphorus Making, 1851-1951

A destitute tenant farmer, in Pyung Yang, Korea, gives away his twelve year old son to the nationalist patriot,

Doh Sahn, in 1908. Following the ardent Patriot, thrusts the teenager into the midst of an international struggle raging in the Korean Peninsula. Japan proceeds to annex Korea into the Japanese Empire. The Patriot fights to thwart the annexation. As the Japanese police close in, the Patriot and the teenager escape to Tsingtao and Vladivostok; the two finally reach New York in 1911, as Korea is no more. The teenager struggles alone to survive in America, and enters Asbury College in Kentucky. Rev. Robert Nahm-Soo Chung in 1926 returns to his homeland. His Evangelistic Crusade Team carries a huge tent of six thousand capacity, on a van-truck provided by American campgrounds and churches. The Team travels even to the remote areas of the Peninsula. He preaches to the throngs suffering under the Japanese, during their darkest hours. Hundreds of thousands of people come to Jesus. He suffers torture in the Japanese prison, for preaching the gospel, and for his close tie with the Patriot. You will walk through his tears and triumphs to preach the gospel. Paul M. Chung, PH.D, is a retired engineering Professor and Dean Emeritus of an engineering college.
